

## LIQUID CRYSTAL DISPLAY DEVICE

### ABSTRACT OF THE DISCLOSURE

The present invention provides a liquid crystal display  
5 device comprising: a laminated protection panel composed of  
a  $\lambda/4$ -plate, a polarizing plate and a transparent protection  
plate; a liquid crystal display; and a phase retarder;

wherein the laminated protection panel is disposed to  
a top surface of a liquid crystal display with a distance, the  
10 phase retarder is disposed between the laminated protection  
panel and the liquid crystal display, and the sum( $\alpha_A + \alpha_B$ )  
of a wavelength dispersion( $\alpha_A$ ) of the  $\lambda/4$ -plate and a wavelength  
dispersion( $\alpha_B$ ) of the phase retarder is in the range of 1.11  
to 1.95. In this liquid crystal display device having a  
15 transparent protection plate such as a touch panel, coloring  
of a displayed view looked at in an oblique direction is improved  
while maintaining a display quality in a front direction.
